

## AFTER THE STORM

*If you are not comfortable or able to safely inspect your roof, hire a professional roofing contractor to conduct a full inspection for you.*

### From Outside

- Look for any missing or damaged Shingles. If you find any, have them replaced immediately.
- Check for any damage to flashing around chimneys, skylights, vents. Flashing helps seal these areas and prevent leaks, so it's important to have it in good condition.
- Look for any standing water on the roof, it could be sign of damage.
- Inspect the gutters and downspouts for debris or damage. Clogged gutters can lead to water pooling on the roof.
- Check for any damage to fascia and soffits.
- Take note of any other problems you see, such as cracks or holes.

### From Inside

- If you notice any water stain on ceilings or walls, it's possible there is a leak somewhere.
- Water damage can cause peeling of paint or wall paper.
- Check for mold growth inside the house it can be sign of damage or leak.
- Pooling of water in the attic is sign of damage or leak in roof.
